This application has a Lack of Unity as summarized below.

I. Claims 1-25, 31-35, 39-41, 46-48, 50, and 51; drawn to probes and the first method of use in detection, classified in Classes 530 and 435, subclasses 300 and 6, respectively.

II. Claims 26-30, 37, 38, 42-45, and 49; drawn to methods for binding, classified in Class 536, subclass 25.3.

III. Claim 36, drawn to a HIV-lock composition, classified in Class 536, subclass 23.1.

The Groups lack a common Special Technical Feature.

The binding reaction of Group II lacks any mention of detection therein.

The HIV-lock of Group III is an independent invention compared to the other Groups.

Because these inventions have a Lack of Unity for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, a Lack of Unity determination for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR § 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the

currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).
